EDUCATION

Software Engineer Istanbul Aydin University

09/2018 - 07/2023

Istanbul, Turkey

SKILLS

PERSONAL PROJECTS

Graduation Project (Go, React, MongoDB, Firebase) (01/2023 - Present)

- I focused on making an e-commerce website in my graduate project in software engineering at Istanbul Aydin University.
- I took care to have Firebase, local storage cookie in my e-commerce project.
- Efforts were made to enable users to access products more easily with filtering.
- My main goal in this project is system security, user friendliness and writing clean code.

Full Stack Project (Go, React, MongoDB) (01/2023 - 01/2023)

- Go, React, MongoDB and Material ui were used in this project.
- Back-end tests was written and in addition, it was checked whether the back-end is working correctly with postman.
- When connecting the front-end and the back-end, axios was used, then the redux part was added.
- Filtering, adding, deleting, updating and listing were used in the project.

Front-end Project (React, goREST api) (03/2023 - 03/2023)

- Redux was used in the front-end, the front-end was connected to the goREST api with axios. Multiple pages were used in the project and filtering was done.
